Route 66 Mainstreet Chicago to L.A.

ROUTE 66 WAS CERTIFIED IN 1926, WHEN THE NATION ADOPTED A NUMBERED SYSTEM OF PRIMARY, CROSS-COUNTRY ROADS. FULLY PAVED BY 1936, 2, 200-MILE-LONG RT. 66 PASSED THROUGH 8 STATES, 3 TIME ZONES, & SEVERAL OF NORTH AMERICA'S GREAT BIOREGIONS. THIS LEGENDARY ROAD WAS "IMMORTALIZED" IN LITERATURE, IN SONG & ON TELEVISION. GRADUALLY "REPLACED" BY CONTROLLED-ACCESS, HOMOGENEOUS HUGE "INTERSTATES," 66 WAS DECERTIFIED IN 1985, CEASING TO EXIST "OFFICIALLY." BUT WELL OVER 3000 OF THE OLD ROAD IS STILL DRIVEABLE — SO, TRAVEL BACK IN TIME, & LEAVE THE STRESS BEHIND — ON "THE INTERSTATES..." THEN YOU TOO WILL SAY, "I STILL GET MY KICKS, ON OLD ROUTE 66!"

TALLGRASS PRAIRIE
ACROSS ILLINOIS & EASTERN MO., WATCH FOR PRAIRIE ALONG RAILROAD TRKS.

The NUMBERS on this map PINPOINT THE LOCATIONS (BLACK DOTS) OF EACH POSTCARD "SCENE." THE POSTCARDS WERE NUMBERED IN THE ORDER THEY WERE COMPLETED & PRINTED.

San Rafael Utah

THE SAN RAFAEL REEF

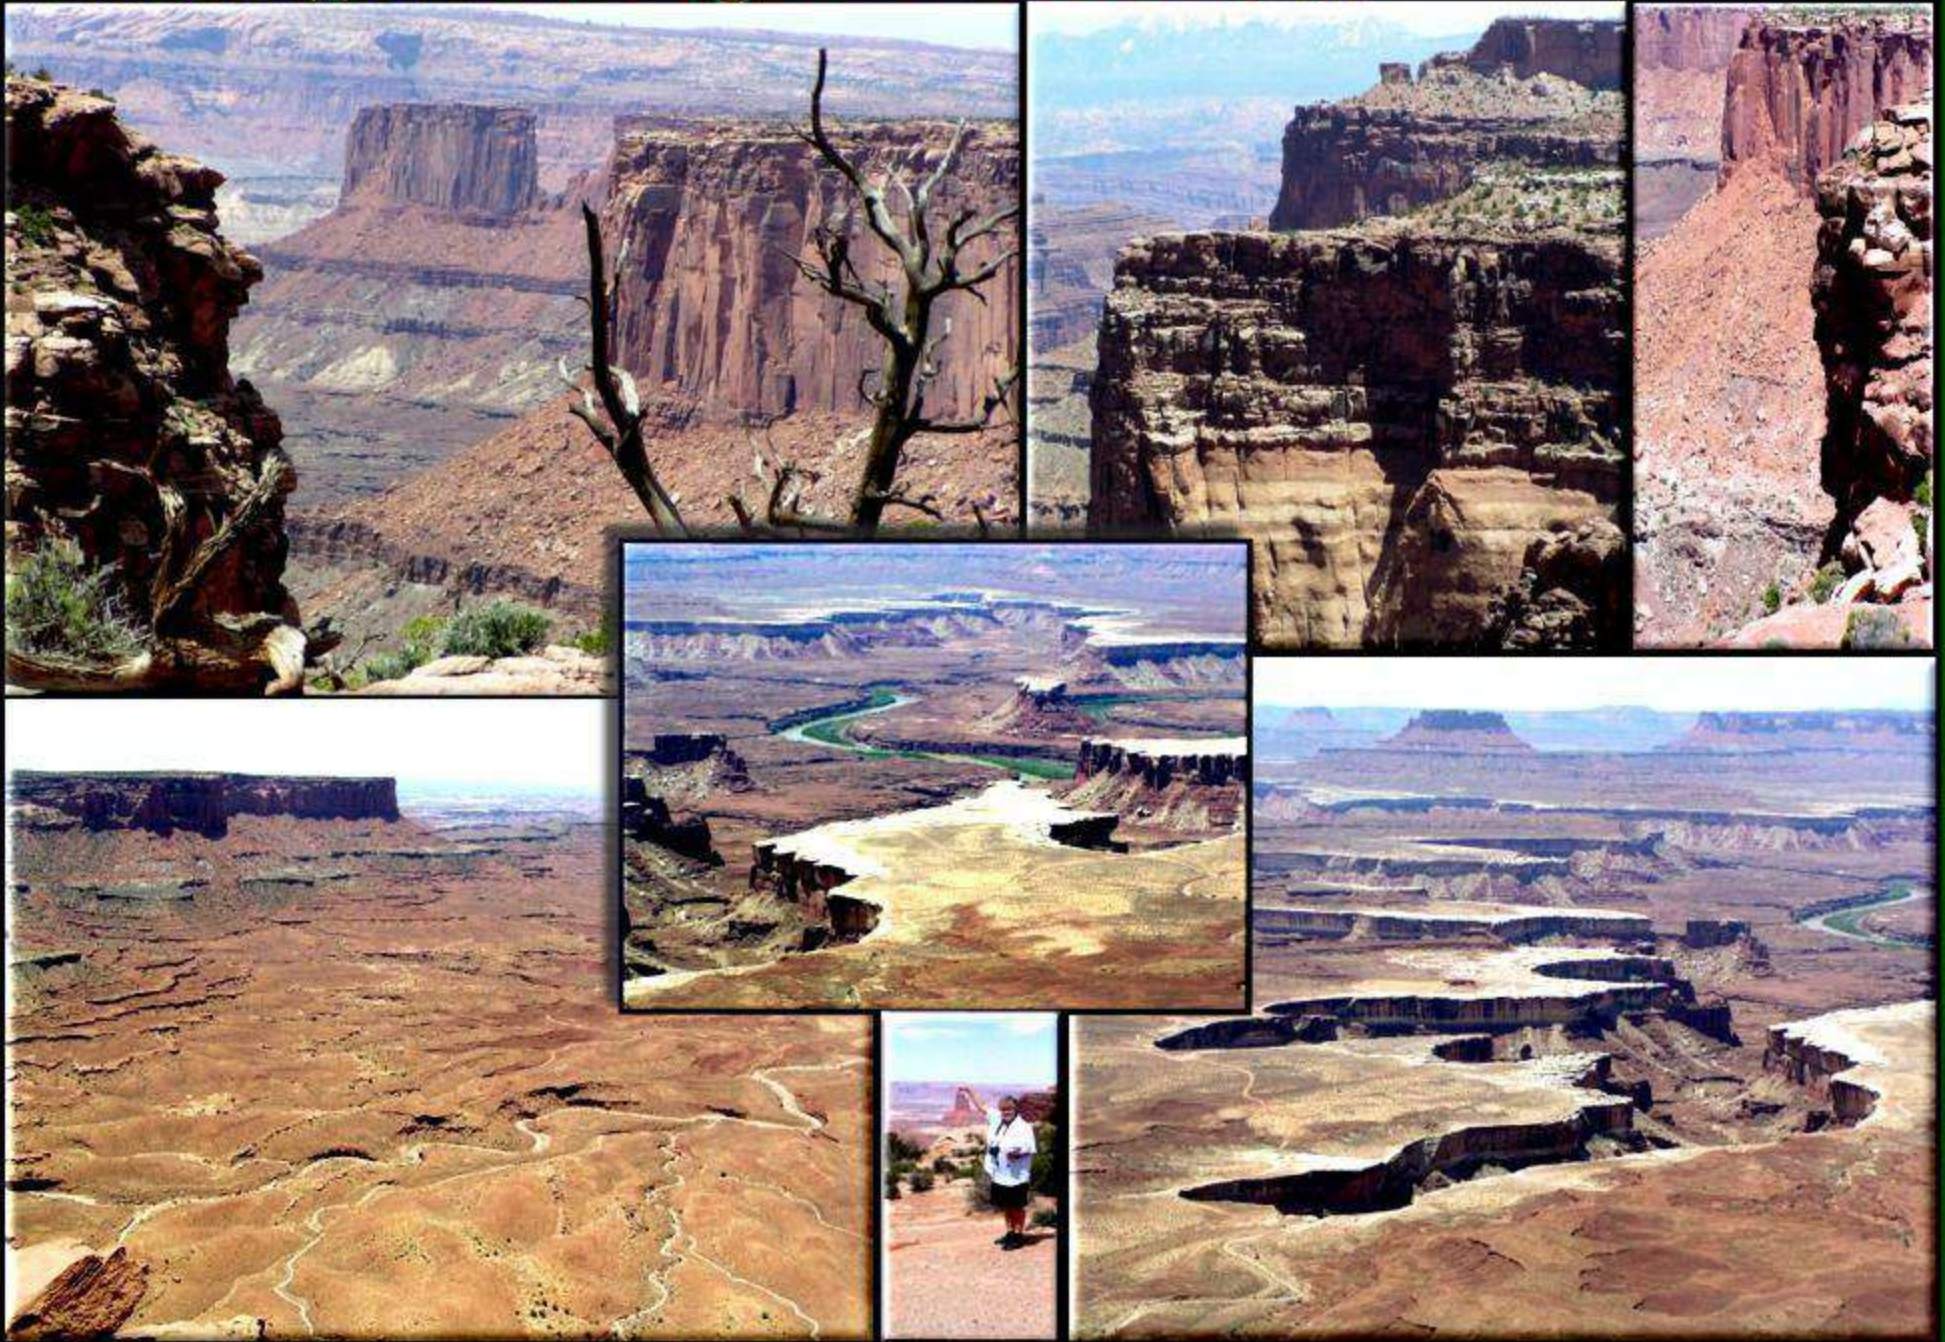

Suddenly the layers of the San Rafael Reef dip to the east. The discovery is in itself of the great cliff-capped hills and the rugged state of the San Rafael Reef. The Reef forms the steep eastern edge of the Swell anticline. The solidly cemented, hard-to-erode Navajo

Sandstone crowns the flat tops with cliffs over 200 feet high. The underlying Kayenta sandstones and less solidly cemented shales and siltstones, is much easier to erode, so it forms a slope rather than a cliff. The dark red cliffs below it mark the presence of the well-cemented Wingate Sandstone. These layers were deposited

during the Triassic Period. This is the typical red rock of the Colorado Plateau. The red color is due to the presence of iron oxide. The depth of color depends on the amount of iron oxide in the sands and and sculpted stunning narrow canyons and for hikers and rock climbers.
